HARVEST WATER: RELIABLE RECYCLED WATER FOR REGIONAL SUSTAINABILITY

Harvest Water, SacSewer's landmark recycled water project, broke ground in 2024 and is anticipated to be operational in 2027. This innovative project will be one of California's most extensive water recycling programs, transforming how our region reuses water.

Once complete, Harvest Water will deliver regional environmental benefits that will facilitate groundwater recovery, boost sustainable agriculture, strengthen local habitats, and offer near-term benefits to the Sacramento-San Joaquin Delta.
